

Anchorpro rigging plates allow for the creation of multiple anchoring points to help better organize and protect work areas.

The 3-D design is engineered to be very robust and features smooth profiles that allow for the direction connection of ropes and slings without the use of carabiners.

The large central connection point and 20 mm connection holes are shaped and organized to optimally position anchor points and balance load distribution.

Constructed from CNC milled aluminum alloy for an excellent strength-to-weight ratio.

Available in 3 sizes: 4, 8, 12 holes.

371201

CNC milled aluminum alloy

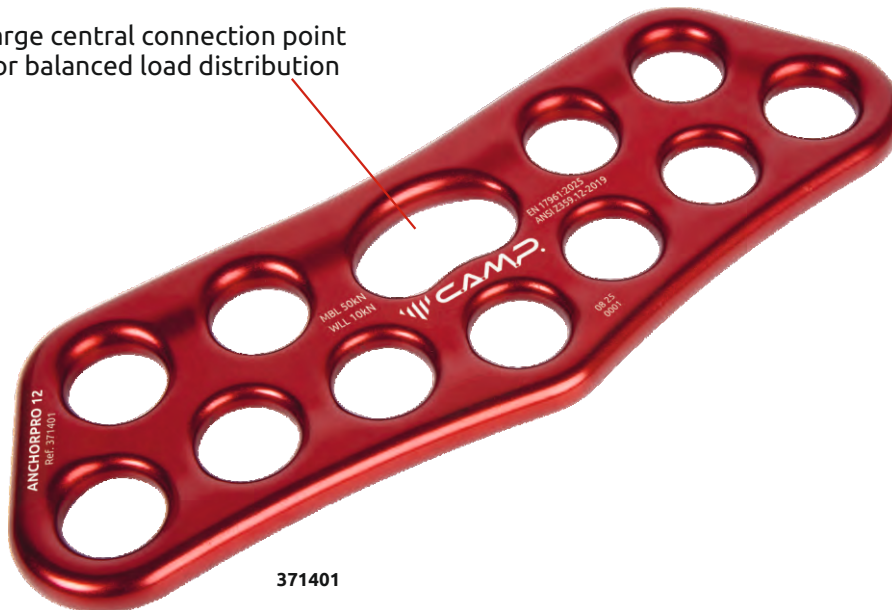

Rope friendly: smooth profiles that allow for the direction connection of ropes and slings

371301

20 mm connection holes

Large central connection point for balanced load distribution

371401
